

Step or Impulse Response

$$\text{Ratio} = \frac{\text{max(STEP) between } t=2\text{s and } t=3\text{s}}{\text{max(STEP) between } t=0\text{s and } t=1\text{s}}$$

Any ratio smaller than $\sim 1/10$, don't care.

Any ratio bigger than 1, care a **lot**

Same for impulse response
